                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2902 ---GCTGAGCACTTCCGCCTGCCCAGG 2925
as gene therapy vectors. An anti-resistance protein antibody may be used to isolate a resistance protein, or facilitate the purification of natural resistance protein from cells and of recombinantly produced resistance protein expressed in host cells. The methods are useful for treating a subject having a disorder, such as a drug-resistance cancer, characterized by aberrant resistance sequence expression or activity by administering to the subject a resistance modulator. The present sequence represents a semaphorin cDNA sequence, whose expression was increased in
                                                                                                                                                          the test compound, and comparing its expression or activity level in a cell without the test compound. The drug resistant sequences are useful in identifying drug resistant cells, in screening methods directed to the identification of compounds that can modulate the drug resistance of a cell type or multiple cell types. An isolated resistance protein can be used as an immunogen to generate antibodies that bind the resistance protein. Resistance nucleic acids may be inserted into vectors and used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  31-JAN-2001; 2001WO-US03161.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        02-AUG-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WO200155455-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Semaphorin D cDNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-OCT-2001 (first entry)
                                                                                                                                                                                                                                                                                                     The invention relates to a method of determining whether a test compound modulates the drug resistance of a cell that comprises determining the expression or activity level of resistance genes (e.g. semaphorin D, B94, mel-14 antigen, 24p3, prolliferin or maspin) in a cell in the presence of
                                                                                                                                                                                                                                                                                                                                                                                                            Example 1; Fig 1A-B; 79pp; English.

This sequence encodes the wild type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift mutation. The method is used to diagnose age-related diseases, especially cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's disease, Down's syndrome, myotonic dystrophy, Huntington's disease, multiple sclerosis, alcoholic liver disease, diabetes mellitus type II and many others listed) or susceptibility to these disorders. The method allows a definitive diagnosis of Alzheimer's disease in living patients, at an early stage. It is based on the observation that disease may be caused by mutations in RNA rather than DNA. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Diagnosing disease by detecting frameshift mutations in RNA or corresponding protein mutations : used to diagnose cancer and neurological diseases, particularly Alzheimer's disease, and also for treatment and prevention with specific ribozymes or wild-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 1998-609901/51.

The proteins encoded by the grasshopper semaphorin I (AAQ87441), human semaphorin III, vaccinia virus semaphorin IV (AAQ87443), Drosophila semaphorin I and II (AAQ87444-5), Tribollum semaphorin I (AAQ87446) or variola major (smallpox) virus semaphorin IV (AAQ874747) genes were used to generate a series of peptides (AAR70370-R70418), which retain to generate a series of peptides (AAR70370-R70418), which retain semaphorin receptor binding activity. The semaphorin derived or semaphorin receptor derived peptides are potent modulators of nerve cell growth, immune responsiveness and viral pathogenesis. They can be used in diagnosis and treatment of neurological disease and treatment of neuro-regeneration, immune modulation and diagnosis and treatment of neuro-regeneration, immune modulation and diagnosis and treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                 Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides polypeptides (AAY27127-Y27133) produced by human adult brain tissue, human bone marrow or a human umbilical cord venous endothelial cell. Host cells transformed with vectors comprising the nucleic acids encoding the polypeptides are used for the recombinant expression of the polypeptides. The polypeptides can be used in diagnosis, treatment and basic studies, with wide applications in treatment depending on the activity to be aimed at. Sequences AAX89112-125 represent nucleic acids encoding the polypeptides.

The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptorligand interactions. The polypeptides and nucleotide sequences pharmaceutical and diagnostic agents. AAA37145 to AAA3730 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.

Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds -

767 301

Claim 2; Fig 347; 774pp; English.

Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR CC primers for PRO polypeptides of the invention. The sequences of the CC invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of comparing the level of expression in the test sample of normal cells, whereby a comparing the mammal and a control sample of normal cells, whereby a comparing the mammal. Mammals include dogs, cats, cattle, horses, sheep, comparing the mammal. Mammals include dogs, cats, cattle, horses, sheep, comparing the mammal include dogs, cats, cattle, horses, sheep, comparing the control sample of polypeptides can be contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The contacted with it. A specific polypeptide can be used to determine the presence of tumours and also contacted. The proteins can be used to determine the presence of tumours and also breast, prostate, rectal, cervical, or liver tumours, in mammalian contacts. The proposed proteins can be used to determine the presence of colon, the proposed proteins can be used to determine the presence of tumours and also be used to determine the presence of tumours and also contacted. The provide probes specific for the PRO nucleic acids of the used for manafalan and the used for manafalan specific provides. used for genetic analysis of individuals with genetic disorders

pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                             1747

semaphorin I - fruit fly (Drosophila melanogaster) (fragment)
C.Species: Drosophila melanogaster
C.Date: 06-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 07-May-1999
C.Accession: B49423
R.Kolodkin, A.L.; Matthes, D.J.; Goodman, C.S.
Cell 75, 1389-1399, 1993
A.Title: The Semaphorin genes encode a family of transmembrane and secreted growth cone A; Reference number: A49423; MUID:94094332
A; Reference number: M49423; MUID:94094332
A; Status: preliminary; nucleic acid sequence not shown; not compared with conceptual transmembrane type: mRNA
A; Residues: 1-656 < KOL>
A; Residues: 1-656 < KOL>

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                               1830

FUNCTION: INDUCES THE COLLAPSE AND PARALYSIS OF NEURONAL GROWTH COMES. COULD SERVE AS A LIGAND THAT GUIDES SPECIFIC GROWTH COMES COULD SERVE AS A LIGAND THAT GUIDES SPECIFIC GROWTH COMES BY A MOTILITY-INHIBITING MECHANISM. BINDS TO NEUROPILIN. SUBCELLULAR LOCATION: Secreted (By similarity). TISSUE SPECIFICITY: EXPRESSED AT RELATIVELY HIGH LEVELS IN BRAIN AND MUSCLE, MODERATE LEVELS IN LUNG, BURSA, AND HEART AND VIRTUALLY ABSENT IN LIVER. COLLAPSIN-1, -2, -3, AND -5 BIND TO OVERLAPPING BUT DISTINCT AXON TRACTS.

DOMAIN: STRONG BINDING TO NEUROPILIN IS MEDIATED BY THE CARBOXY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HYRLPR 770
